

Gardens of Light

Until November 4th, you are invited to visit the unique Gardens of Light at the Montreal Botanical Garden. Two Gardens were unveiled on September 7th to celebrate the 20th anniversary of the Botanical Garden: the Japanese Garden and the Chinese Garden. This year again, the event awaits more than 200,000 visitors that will stroll in the paths to the sound of traditional music.

In the Japanese Garden, the visitor is immersed in a calm and serene atmosphere where lighting design accentuates the textures, shapes and colors of the plants.

In the Chinese Garden, The Magic of Lanterns is back with nearly a thousand Chinese lanterns which 250 are major works of art. After one year of preparation and weeks of installation, the Botanical Garden is proud to present the Feast of Peaches, organized by Xi Wang Mu, Queen Mother of the West.

For a Sustainable Exhibition

Since 2008, the Botanical Garden relies on the efficiency, the reliability and the brightness of HEICO lighting™ Contactless LED system.

« This change resulted in a significant reduction of energy consumption (near ten times less than our former technology) and the reliability of a system confronted to external climatic conditions. »¹

HEICO lighting™ LED modules, a source of inspiration!

The visitors will notice the Contactless LED modules in several places throughout their visit.

With this system, it is possible to select a unique combination of colors and intensities for each Chinese lantern. This allows the designer to give a very unique and distinct look to the event.

As for signs, only a few Contactless LED modules are needed to guide visitors along the route. Since signs are temporarily installed, the Garden needed a reliable system that was easy to install and dismantle. The picture on the right demonstrates a sign with only four white Virgo™ XS inserted into its bollard. The result is a uniform and defined illumination.

¹ From website : <http://www1.ville.montreal.qc.ca/banque311/content/jardin-botanique-la-magie-des-lanternes-2012> Translation by HEICO lighting™

In this second example, two rows of white Virgo+™ LS6 light the informative signs.

The LED modules are the light source of architectural elements such as this little bridge overlooking the water lilies.

Gently inserted in an aluminum frame, the Virgo+™ LS4 white modules complement the luminaires for accent lighting throughout the water garden.

You can visit the Gardens of Light until November 4th, 2012. For more information, visit the Botanical Garden of Montreal Website, A Space for Life : <http://www2.ville.montreal.qc.ca/jardin/jardin.htm>

About HEICO lighting™

HEICO Lighting™ specializes in designing, producing and marketing electronic lighting products. Since 1985, we have introduced major breakthrough technologies, the more recent being: Contactless LED illumination powered by electromagnetic induction and the FIRST Electrolytic Capacitor FREE solid-state power supply. For additional information, visit <http://www.heicolighting.com> or contact us at 1-800-665-1166.
